Abstract

Prior to the publication of RFC 2489 (which was updated by RFC 2939), several option codes were assigned to proposed Dynamic Host Configuration Protocol (DHCP) options that were subsequently never used. This document lists those unused option codes and directs IANA to make these option codes available for assignment to other DHCP options in the future.

The document also lists several option codes that are not currently documented in an RFC but should not be made available for reassignment to future DHCP options.

1. Introduction

Section 2 of this document lists the unused DHCP option codes from the IANA list of BOOTP and DHCP option codes [1]. Each option code includes any known documentation and contact information from the IANA list. IANA will make these option codes available for assignment to other DHCP options in the future.

Section 3 lists several DHCP option codes that are not currently documented in an RFC but should not be made available for reassignment to future DHCP options.

2. Unused DHCP Option Codes to be Reassigned to Future DHCP Options

The option codes listed in this section are to be returned to IANA for reassignment to new options. Responses from associated contact persons are noted where they have been received.

2.1. Service Location Protocol Naming Authority

Code: 80
Name: Service Location Protocol Naming Authority
Defined in: (expired Internet-Draft)
Contact: Charlie Perkins
Reason to recover: Never published as standard and not in general use

2.2. Relay Agent Options

Codes: 83, 84
Name: Relay Agent Options
Defined in: Early draft of RFC 3046 [2]
Contact: (none)
Reason to recover: Not defined in RFC 3046 as published

2.3. IEEE 1003.1 POSIX Timezone

Code: 88
Name: IEEE 1003.1 POSIX Timezone
Defined in: (expired Internet-Draft)
Contact: Mike Carney
Reason to recover: Never published as standard and not in general use

2.4. FQDNs in DHCP Options

Code: 89
Name: FQDNs in DHCP Options
Defined in: (expired Internet-Draft)
Contact: Ralph Droms; agrees that option code should be reassigned
Reason to recover: Never published as standard and not in general use

2.5. VINES TCP/IP Server

Code: 91
Name: VINES TCP/IP Server
Defined in: (none)
Contact: (none)
Reason to recover: Never published as Internet-Draft

2.6. Server Selection

Code: 92
Name: Server Selection
Defined in: (none)
Contact: (none)
Reason to recover: Never published as Internet-Draft

2.7 IPv6 Transition

Code: 96
Name: IPv6 Transition
Defined in: (expired Internet-Draft)
Contact: Dan Harrington; agrees that option code should be
reassigned
Reason to recover: Never published as standard and not in general use

2.8. Printer Name

Code: 100
Name: Printer Name
Defined in: (none)
Contact: (none)
Reason to recover: Never published as Internet-Draft

2.9. Multicast Assignment through DHCP

Code: 101
Name: Multicast Assignment through DHCP
Defined in: (expired Internet-Draft)
Contact: Baiju Patel, Munil Shah
Reason to recover: Never published as standard and not in general use

2.10. Swap Path

Code: 108
Name: Swap Path
Defined in: (none)
Contact: (none)
Reason to recover: Never published as Internet-Draft

2.11. IPX Compatibility

Code: 110
Name: IPX Compatibility
Defined in: (none)
Contact: Juan Luciani; agrees that option code should be
reassigned
Reason to recover: Never published as Internet-Draft

2.12. Failover

Code: 115
Name: Failover
Defined in: Early revisions of "DHCP Failover Protocol" [3]
Contact: Kim Kinnear
Reason to recover: Current version of "DHCP Failover Protocol" does not use a DHCP option

3. Option codes to be reserved by IANA

The option codes listed in this section are the subject of ongoing work in the DHC Working Group (WG). These option codes should remain on the IANA list of assigned option codes [1] until the DHC WG has made a final decision about their disposition.

3.1. Option codes used in PXE Specification

The following option codes are used in the "Preboot Execution Environment (PXE) Specification, Version 2.1" [4]. However, although these options are in widespread use by devices that use PXE, none of these option codes have been described in a published RFC.

The DHC WG will endeavor to have specifications for these options published.

3.1.1. Client System

Code: 93
Name: Client System
Defined in: "Preboot Execution Environment (PXE) Specification, Version 2.1" [4]
Contact: Michael Johnston
(frenchy@quiet-like-a-panther.org)

3.1.2. Client NDI

Code: 94
Name: Client NDI
Defined in: "Preboot Execution Environment (PXE) Specification, Version 2.1" [4]
Contact: Michael Johnston
(frenchy@quiet-like-a-panther.org)

3.1.3. UUID/GUID Client Identifier

Code: 97
Name: UUID/GUID Client Identifier
Defined in: "Preboot Execution Environment (PXE) Specification, Version 2.1" [4] (and an expired Internet-Draft)
Contact: Dan Harrington, Michael Johnston
(frenchy@quiet-like-a-panther.org)

3.2. In Use by Apple

The following option codes are used by devices from Apple Computer. However, none of these option codes have been described in a published RFC.

The DHC WG will endeavor to have specifications for these options published.

3.2.1. LDAP Servers

Code: 95
Name: LDAP Servers
Defined in: (none)
Contact: Dieter Siegmund, dieter@apple.com
Reason to recover: Never published in an RFC

3.2.2. Netinfo Parameters

Codes: 112, 113
Name: Netinfo Address, Netinfo Tag
Defined in: (none)
Contact: Dieter Siegmund, dieter@apple.com
Reason to recover: Never published in an RFC

3.2.3. URL

Code: 114
Name: URL
Defined in: (none)
Contact: Dieter Siegmund, dieter@apple.com
Reason to recover: Never published in an RFC

3.3. Option Code Extensions

Note that these option codes are identified in "Extending DHCP Options Codes" [5] as part of a mechanism for extending the set of option codes available to DHCP. If these option codes are not used for DHCP option code extension, they will be returned to IANA for reassignment to other DHCP options.

Codes: 126, 127
Name: Option Code Extensions
Defined in: (expired Internet-Draft)
Contact: Ralph Droms

4. Already Returned for Reassignment

The option codes 99, 102-107, 109 and 111 have already been returned for reassignment to future DHCP options.

5. Security Considerations

This document has no known security implications, as none of the reclaimed options are known to be in use.

6. IANA Considerations

IANA has returned the DHCP option codes listed in Section 2 to the list of available option codes. These option codes may be reassigned to new DHCP options, according to the procedures in RFC 2939 [6]. IANA is requested to reassign these option codes after the list of option codes that have never been assigned or have previously been returned has been exhausted.
